

ReadyBath® & ReadyBath® Fragrance-Free

Product Specifications

Washcloths: The New ReadyBath washcloth is made from high grades of rayon, polyester, and polypropylene fibers. The fibers, specifically designed in length and diameter, allow the washcloth to be needle-punched into a soft, yet extremely low-linting fabric. This unique blend of fibers provides exceptional moisture retention, minimizing the migration of fluid and allowing each washcloth to be evenly saturated.

Ingredients: The New ReadyBath formula is FDA registered and designed to provide excellent skin care. Safe and mild, ReadyBath does not contain any harsh preservatives or ingredients. Additionally, the formula contains FDA approved ingredients that offer significant benefits to patients and care givers alike. Listed below are the formula's four key ingredients with attached benefits commonly referred to as the "**Core Four**".

1. The FDA approved active ingredient **Allantoin** protects, soothes, and comforts minor skin irritations. Additionally, scientific studies indicate that Allantoin helps heal wounds and skin ulcers while stimulating the growth of healthy tissue.
2. The FDA approved active ingredient **Benzalkonium Chloride**, a proven antimicrobial, kills and controls the growth of various fungi and bacteria. Killing bacteria contributes greatly to eliminating and controlling odors.
3. **Phospholipid CDM**, a multi-functional preservative and emulsifier. CDM is a patented ingredient that is very mild and recommended for infant formulations. It's a superior cleanser as well as a broad-spectrum preservative.
4. **Phospholipid EFA**, patented and organically designed to be biomimetic (mimics natural skin). EFA is derived from pure natural safflower oil and contains a high level (80%) of linoleic acid, the essential fatty acid needed to maintain healthy skin.

Additional Ingredients:

- Purified water.
- Polysorbate 20, a safe and widely used nonionic emulsifier.
- Aloe Vera Gel, known for its superior skin care benefits.
- Disodium EDTA, helps maintain pH balance while removing unwanted metal ions during manufacturing.
- Sodium Benzoate, a safe and widely used preservative.
- Citric Acid, a multi-functional, widely used cosmetic ingredient. It balances pH, preserves, inhibits foaming and helps remove unwanted metal ions during the manufacturing process.

Packaging: The New ReadyBath package is made from the highest quality film available for wet wipes. It offers maximum shelf life, minimum evaporation and protects product integrity.
